P3D mode consists of two different "projection" modes which control the way the renderer creates the 3D illusion. "Perspective" mode is the default and uses the trick of displaying objects that are farther away as smaller. This effect is commonly referred to as "foreshortening." In most cases, you don't need to specify the parameters of perspective projection, but you can with the [3D Face Scan | Professional 3D Scanning Solutions](#) 3D face scanning applications in healthcare.
