[Background calibration of timing skew in time-interleaved ...](#)

To achieve the high-data rates of these communication systems, a time-interleaved ADC is typically used. However, this type of ADC suffers from several time-varying errors, the most prominent of which is timing skew. This thesis introduces a statistics-based background calibration algorithm that compensates for the effect of timing skew.

Background Calibration. As the name implies, background calibration works in the background to sense and correct various sources of mismatch. Its main advantage is that normal output data is not interrupted. Background calibration compensates for drifts due to time, temperature, or supply variation, but puts extra requirements on the input signal.
