Chemokine - Wikipedia

The major role of chemokines is to act as a chemoattractant to guide the migration of cells. Cells that are attracted by chemokines follow a signal of increasing chemokine concentration towards the source of the chemokine.

BioLegend Chemokines and Chemokine Receptors

Chemokines are a class of secreted molecules that induce chemotaxis (migration) of target cells. Chemokines and their receptors play essential roles in immunology during inflammation and in homeostasis. BioLegend develops and manufactures world-class, cutting-edge immunological reagents for biomedical research, offered at an outstanding value.
