We present the object model of TEDM, a data model devised using concepts from both object-oriented systems and deductive reasoning systems. Each of the following topics is briefly discussed in this paper: 1) basic concepts of the model, 2) its complex object space, 3) its extension with abstract objects to the object space, 4) its data manipulation facilities, 5) its notion of rules and

Deductive databases and object-oriented databases are at the forefront of research in next-generation intelligent database systems. Object-oriented programming and design methodologies have great potential, promising to reduce the complexity of very large software systems in such domains as computer-aided design and manufacturing, integrated office information systems, and artificial intelligence.
