Deep-Inelastic reactions and fusion - ScienceDirect
During the last decade considerable progress has been
made in our understanding of the mechanisms of reactions
between complex nuclei. In Session 3, some aspects of this
progress as well as some of the outstanding problems are
reviewed for damped or deep inelastic reactions and
fusion.

I think that we can consider that all the cases correspond to the same type of reaction. However, both the relative probability of this reaction and the observed features of the final fragments are strongly dependent on the importance of the **Heavy ion reactions: an experimental vista.** [Review ... Examples of recent experiments in the areas of fusion and deep-inelastic scattering are presented and discussed. Emphasis is placed on the importance of individual nucleons in the fusion process, the effects of high angular momentum, and the understanding of compound nuclear decay.

interaction regions: fusion, incomplete fusion and deep inelastic collisions, peripheral and Coulomb regions. When the two ions come very close to each other and the incident energy is high enough, the interaction leads to the formation of a compound nucleus; this is a fusion reaction. The ordered motion from the projectile and the target turns into a chaotic thermal motion with a cascade of
