**Multi-phase image segmentation with the adaptive ...**

This paper proposes a method for image segmentation using a deformable triangle mesh in the image domain. We define a piecewise constant function by labeling the mesh triangles with different phases, each representing a segment of an image.

**Improving deformable surface meshes through omni ...**

Deformable surface models are often represented as triangular meshes in image segmentation applications. For a fast and easily regularized deformation onto the target

object boundary, the vertices of the mesh are commonly moved along line segments
