The data are further analysed to yield separate oxygen-hydrogen and oxygen-oxygen partial structure factors for liquid water. For the second part of the analysis an effective mass model of the dynamic scattering law is used, with the model parameter, the effective mass of the scattering particle, chosen by a least-squares fit to the measured differential cross sections. The final pair  
**The total molecular dipole moment for liquid water** ment for liquid water, whereas one would expect there to be a noticeable difference between the dipole moment of water molecules in ice and in liquid water. It is believed that the dipole moment of the molecule increases as a result of its interaction with neighboring water molecules; in this sense, water molecules in ice can be expected to be more polarized<sup>2</sup> and hence have a larger
