Crystals and polycrystals, composites and polymers, grids and multibar systems can be considered as examples of media with microstructure. A characteristic feature of all such models is the existence of scale parameters which are connected with micro geometry or long-range interacting forces.

**GEOMETRIC DESCRIPTION OF MEDIA WITH MICROSTRUCTURE AND A ...**

In the present paper we introduce distinct differential geometric models for media with microstructure and study the relations between them. In particular we use a geometric formulation of plasticity and develop a Hamiltonian set-up for the dynamics of plasticity.

**Microstructure continuum modeling of an elastic metamaterial**

In this study, an approach for developing microstructure continuum models to represent elastic metamaterials was presented. Subsequently, this continuum model was used to study wave propagation and band gaps in elastic metamaterial with resonators. In contrast to the use of the conventional continuum theory with which the effective mass density would become frequency-dependent and negative
