Observational vs. experimental studies | Institute for ...
Experimental studies are usually randomized, meaning the subjects are grouped by chance. Randomized controlled trial (RCT): Eligible people are randomly assigned to one of two or more groups. One group receives the intervention (such as a new drug) while the control group receives nothing or an inactive placebo.

Experimental Design - Statistics How To
However, it isn't always ethical or feasible to run experimental studies, especially in medical studies involving life-threatening or potentially disabled studies. In these cases, observational studies are used.

Chapter 9. Experimental studies | The BMJ
The main application of experimental studies, however, is in evaluating therapeutic interventions by randomised controlled trials. Randomised controlled trials At the outset of a randomised controlled trial the criteria for entry to the study sample must be specified (for example, in terms of age, sex, diagnosis, etc).
