that help prevent and reduce flood damage. Floods and Floodplain Management 1-4 . A. FLOODS AND FLOODPLAINS Floods are part of the Earth's natural

hydrologic cycle. The cycle circulates water throughout the environment (Figure 1-1). This process maintains an overall balance between water in the air, on the surface and in the ground. Figure 1-1. The Hydrologic cycle
Sometimes the hydrologic

Province of Manitoba | Flood Information

Flood protection work has prevented property damage and reduced the potential impact of flooding on families and communities. Since the 1997 flood, more than \$1 billion has been invested in flood mitigation efforts in Manitoba. This investment has prevented over \$7 billion in damages throughout Manitoba.

Flood - Wikipedia

A flood is an overflow of water that submerges land that is usually dry. In the sense of "flowing water", the word may also be applied to the inflow of the tide.

Floods

Floods are the most frequent natural hazard in Canada. They can occur at any time of the year and are most often caused by heavy rainfall, rapid melting of a thick snow pack, ice jams, or more rarely, the failure of a natural or man-made dam.
