[The future of network security | Computerworld](#)

Network security will be vital to maintaining system control. The future of network security might be far from clear-cut. One thing is clear -- it will certainly be richer and more sophisticated.

The Future of Network Security - CableLabs

The increase in value may be exponential. Metcalfe's Law asserts that the value of a telecommunications network is proportional to the square of the connected users of the system. Consequently, the more people and devices a network connects, the greater the value of the network. This reality creates a necessary dynamic tension that may never go away.
