which represent a system of equations in the unknowns u_i . If the equation is linear and the approximate solution is sought in the form of a linear combination of the given (so-called coordinate) functions ϕ_j , then the system of equations in u_i will also be linear.

Spectral Collocation Method for Fractional Differential

...

Then, operational matrices for generalized fractional operators are derived and spectral collocation methods are proposed for differential and integral equations with different fractional operators. At last, the method is applied to generalized fractional ordinary differential equation and Hadamard-type integral equations, and exponential convergence of the method is confirmed. Further, based
