Roundup of Software Defined Radios

Roundup of Software Defined Radios New software defined radio (SDRs) products are popping up every few months these days so we thought we'd compile a big list of available SDRs as there are a few people who were bitten by the RTL-SDR bug and are now looking to upgrade.

Introduction to Software-Defined Radio - All About Circuits

Software-defined radio is a concept according to which RF communication is achieved by using software (or firmware) to perform signal-processing tasks that are typically performed by hardware. A software-defined radio (as in, the device itself) is an RF communication system that incorporates a significant amount of this software-based signal-processing functionality.

Software-defined radio - Wikipedia

Software-defined radio (SDR) is a radio communication system where components that have been traditionally implemented in hardware (e.g. mixers, filters, amplifiers, modulators/demodulators, detectors, etc.) are instead implemented by means of software on a personal computer or embedded system.
