Introduction to Measure Theory and Functional Analysis ...

This is an excellent introductory text on measure theory and integration, with a very good presentation of two fundamental aspects of functional analysis: Hilbert spaces and Banach spaces. The material is presented at a level accessible for a graduate student in mathematics or a researcher in another, related discipline. Each section contains a large number of examples and exercises.

"An Introduction to measure theory" / Terence Tao  
which is an introduction to the analysis of Hilbert and Banach spaces (such as  $L^p$  and Sobolev spaces), point-set topology, and related top-ics such as Fourier analysis and the theory of distributions; together, they serve as a text for

a complete first-year graduate course in real analysis. The approach to measure theory here is inspired by the text [Sk2005], which was used as a secondary text

**Measure Theory and Functional Analysis: Nik Weaver**

...

This book provides an introduction to measure theory and functional analysis suitable for a beginning graduate course, and is based on notes the author had developed over several years of teaching such a course. It is unique in placing special emphasis on the separable setting, which allows for a simultaneously more detailed and more elementary exposition, and for its rapid progression into advanced topics in the spectral theory of families of self-adjoint operators. The author's notion of
