Algebraic multilevel preconditioning of finite element ...

We consider an algebraic multilevel preconditioning technique for SPD matrices arising from finite element discretization of elliptic PDEs. In particular, we address the case of non-M matrices. The method is based on element agglomeration and assumes access to the individual element matrices.

Following a microscopic finite element step, a homogenization scheme is used to compute the

macroscopic stress tensor, knowing the distribution of the microscopic stress field. Fig. 2 shows a flow chart of the local stage (integration of constitutive equations) in the case of a phenomenological model and in the case of a FE 2 model.

**Numerical Solution of the Stationary Navier--Stokes ...**

The numerical implementation of a multilevel finite element method for the steady-state Navier--Stokes equations is considered. The multilevel method proposed here for the Navier--Stokes equations is a multiscale method in which the full nonlinear Navier--Stokes equations are only solved on a single coarse grid; subsequent approximations are generated on a succession of refined grids by solving a linearized Navier--Stokes problem. Two numerical examples are considered: the first is an

**A Multilevel Correction Method for Steklov Eigenvalue ...**

In this paper, a multilevel correction scheme is proposed to solve the Steklov eigenvalue problem by nonconforming finite element methods. With this new scheme, the accuracy of eigenpair approximations can be improved after each correction step which only needs to solve a source problem on finer finite element space and an Steklov eigenvalue problem on the coarsest finite element space. This
