Climate Change and Natural Disasters | EcoMENA
Many natural disasters are directly linked with the climate change including floods, hurricanes, heat waves, droughts, wildfires and storms. Such disasters have claimed more than 600,000 lives in the past two decades.

Natural Disasters and Climate Change | National Geographic ...

Linkages between certain extreme weather events and climate change can increasingly be made while the weather event is relatively recent, which can help to highlight the need for climate change mitigation. In 2017, scientists made connections between two weather-related natural disaster events in the United States the California wildfires and the flooding from Hurricane Harvey.

The Impact of Climate Change on Natural Disasters

Climate change may not be responsible for the recent skyrocketing cost of natural disasters, but it is very likely that it will impact future catastrophes. Climate models provide a glimpse of the future, and while they do not agree on all of the details, most models predict a few general trends. First, according to the Intergovernmental Panel on Climate Change, an increase of greenhouse gases
How can climate change affect natural disasters? - USGS.gov

Scientists have predicted that long-term effects of climate change will include a decrease in sea ice and an increase in permafrost thawing, an increase in heat waves and heavy precipitation, and decreased water resources in semi-arid regions.
