The third order nonlinear optical properties of GO and N-GO were studied using continuous wave (CW) laser operating at 532 nm wavelength by employing the Z-scan technique. The nature of the curves suggests that the GO and N-GO exhibits reverse saturable absorption (RSA) and negative nonlinear refractive (NLR) index. Further, nitrogen incorporation has significantly enhanced the nonlinear

[Nonlinear theory of semiconductor lasers - Wikipedia](#)
The nonlinear theory made it possible to explain a number of experiments some of which could not even be explained (for example, natural linewidth), much less modeled, on the basis of other theoretical models; this suggests that the nonlinear theory developed is a new paradigm of the laser theory.
