Representation dimension and tilting - ScienceDirect

Trivially, if  $\text{rep dim } A$  is finite, then the representation dimension of  $A$  is 2. The converse was first shown by Auslander in [3] and was one of the motivations for introducing this notion. We call a generator cogenerator where the minimum is attained an Auslander generator. Let  $T$  be a splitting tilting module (see Section 1 for a definition) with  $\text{proj dim } T$
