 Scattering and Attenuation
 Propagating seismic waves lose energy due to geometrical spreading e.g. the energy of spherical wavefront emanating from a point source is distributed over a spherical surface of ever increasing size intrinsic attenuation elastic wave propagation consists of a permanent exchange between potential (displacement) and kinetic (velocity) energy.

Seismic attenuation - SEG Wiki

Scattering is different from other types of attenuation since the integrated energy in the total wavefield remains constant. Scattering of high-frequency seismic waves demonstrates the existence of small scale heterogeneities in the lithosphere.
