## Decomposition Soil Biology

Most soil organisms are heterotrophic, meaning that they obtain carbon and energy through the oxidation of organic compounds. The decomposition of organic matter produced by plants, animals, and soil organisms is a key process affecting a number of important ecosystem processes, such as nutrient cycling and carbon sequestration.

## Soil Microorganisms: An Overview Soil Biology

Organisms in the soil are both numerous and diverse. They range in size from the one-celled bacteria, algae, fungi, and protozoa, to the more complex nematodes and microarthropods, and to the larger organisms such as earthworms, insects, small vertebrates, and plants.

## Soil biology - Wikipedia

Soil biology is the study of microbial and faunal activity and ecology in soil. Soil life, soil biota, soil fauna, or edaphon is a collective term that encompasses all organisms that spend a significant portion of their life cycle within a soil profile, or at the soil-litter interface.
