The stability of rainforest margins is a critical factor in the protection of tropical rainforests (Tschamtkke et al. 2007). At present, however, rainforest margins in many parts of the tropics are far from stable, both in socio-economic and in ecological terms. For example, protected areas may attract, rather than repel, human settlement, which may be due to international donor investment in

Life in the rainforest is strikingly subtle. Rainforests are diverse, in terms of numbers of species, but any one given species is not necessarily plentiful. Some rainforest species have populations that number in the millions, whereas others may consist of a handful of individuals. The biology of tropical rainforests is a biology of rare species. The reason for this occurrence is that the majority of rainforest species are scarce over the range of the forest and may be common in only a few
