Regression and state space models with time varying coefficients are treated in a thorough manner. State space models are introduced as a means to model time varying regression coefficients. The Kalman filter and smoother recursions are explained in an easy to understand fashion. The main part of the book deals with testing the null hypothesis of constant regression coefficients against the alternative that they follow a random walk. Different exact and large sample tests are presented and

Testing for Random Walk Coefficients in the Presence of Varying Coefficients Under H_0 This chapter is devoted to testing for random walk coefficients in state space models, where some coefficients are already known to vary over time. The tests proposed so far are not suitable for this situation since now even under the null hypothesis some coefficients are time varying. However, after a simple
